

Penetration Testing Services

A proactive approach to understanding your threats and vulnerabilities will ensure that your sensitive information, your assets, and your reputation remain intact. We work with you to identify the appropriate penetration testing services for your organisation.

The controls required for basic technical cyber protection are:

What is penetration testing?

A penetration test, commonly known as pentest, is a test carried out on computer systems to identify security weaknesses and potentially obtaining access to the computer's information and data. A penetration test is an information security assessment which simulates an attack against an organization's IT assets. It examines IT systems for any weaknesses that could be used by an attacker to disrupt the confidentiality, availability or integrity of the network and associated data.

When should you consider undertaking a pentest?

With an increasing number of cyber attacks and constantly evolving threats, it's recommended that all organisation undertake regular penetration testing at least once a year.

The following are some example trigger points for arranging a pentest:

- Any significant changes to company infrastructure, network or systems
- Launching new IT products and services
- Undergoing a business merger or acquisition
- Preparing for compliance with data security standards
- Utilising and/or developing custom applications

Why Choose ERS?

We are an Information Security firm offering a diverse portfolio of services including consulting, training and certification, ISO 27001 implementation, penetration testing and risk management.

ERS' consultancy team has been working with Information Security Standards for a range of customers since 1997 and are experienced in managing full implementation and certification of Information Security Standards for clients.

Established by experienced security professionals, we are independent of IT vendors and their products, bringing the benefit of impartiality and allowing us to enable clients with the appropriate tools and knowledge necessary to secure their systems.

ERS will work closely as a team with the client, involving them at all stages of the project, to ensure the transfer of both knowledge and skills and thus empowering the organisation. ERS designates consultants with specific knowledge to the organisation.

All our consultants are professionally qualified in security management or hold IT Security certifications.

Our consultants have years of experience in security and compliance in various industries.

In ERS we believe in practicing what we preach - ERS itself holds the ISO 27001 accreditation and the Cyber Essentials certificate.
