iSaaS Information Security As A Service

In every organisation there are information security requirements and responsibilities. But the demand for Information Security skills in many organisations doesn't justify hiring full time employees or a dedicated information security team.

The ERS Information Security as a Service (iSaaS) solution caters to these issues by providing an outsourced information security function, which forms a part of your organisation. Our iSaaS team will act as your outsourced information security department covering the relevant security functions and requirements. We strive to understand and follow your visions and values, as part of the iSaaS provision.

ERS will maintain on-site presence and will assign named consultants to work with your organisation as part of this provision. The service aims to establish, implement, operate, monitor, maintain and enhance your information security framework. Service level agreements, metrics, and reports guarantee that you are in control at all times about the performance and the return of investment of your iSaaS service.

Key Highlights

- Outsourced Information Security Department.
- Save costs on providing training, awareness to ensure staff competency.
- Fully scalable information security as a service solution.
- Model is delivery and outcome focused.
- Removes the headache of having to manage permanent security resources.
- Regular on-site presence

Business Benefits

- All information security matters are covered a part of iSaaS, as security is embedded as part of you day-to-day business operations.
- No need to hire full time employees. ERS consultants are highly skilled and accredited personnel.
- Gives management peace of mind: your business is secure and security issues are being managed by dedicated professionals.
- Meet business objectives while ensuring new projects are secure and compliant.
- Serve on customer's steering committees if required.
- Flexible allocation of resources, as few, or as many hours/days as you need, scaling up when you need them.
- Regular feedback on information security performance to the business and senior management.
- Address all information security issues effectively using a pragmatic approach. Our methodology integrates seamlessly with IT, including ITIL, Cobit and Agile practices, for example.
- Business is better prepared to address the ever-increasing compliance and security legislations.

ERS CONSULTANCY
trusted information security solutions

Why Choose ERS?

We are an Information Security firm offering a diverse portfolio of services including consulting, training and certification, ISO 27001 implementation, penetration testing and risk management.

ERS' consultancy team has been working with Information Security Standards for a range of customers since 1997 and are experienced in managing full implementation and certification of Information Security Standards for clients.

Established by experienced security professionals, we are independent of IT vendors and their products, bringing the benefit of impartiality and allowing us to enable clients with the appropriate tools and knowledge necessary to secure their systems.

ERS will work closely as a team with the client, involving them at all stages of the project, to ensure the transfer of both knowledge and skills and thus empowering the organisation. ERS designates consultants with specific knowledge to the organisation.

All our consultants are professionally qualified in security management or hold IT Security certifications.

Our consultants have years of experience in security and compliance in various industries.

In ERS we believe in practicing what we preach - ERS itself holds the ISO 27001 accreditation and the Cyber Essentials certificate.
